DOLPHIN

Dai pali di legno modellati dallo scorrere del tempo e dell'acqua, Dolphin raccoglie l'ispirazione grafica unita alla vocazione per il colore, che si trasforma in graffiature e pennellate a contrasto.

Dolphin gets the graphic inspiration from wooden poles modeled by time and water; combined with the vocation for the color, it turns into scratches and contrasting brushstrokes.

WOOD

Il binomio legno e colore di Dolphin si definisce attraverso diverse tipologie di listoni di grandi dimensioni: 40x170, 20x170, 20x120, declinati in 6 morbide essenze. La versione strutturata Aged arricchisce di realistica materia la progettazione mentre gli Snip ed i Listoni Paint svelano scorci improvvisi di colori intensi.

The combination of wood and color of Dolphin is defined by different types of long planks: 40x170, 20x170, 20x120, declined in 6 soft essences.

The textured finishing Aged enriches the series with realistic materia, while the Snip and Listoni Paint reveal sudden glimpses of intense colors.

NUOVI SISTEMI DI POSA NEW LAYING SYSTEM

All'interno delle proprie collezioni più prestigiose ABK dà spazio ai grandi formati rettificati 40x170, correddati dai sottomultipli 20x170 e 20x120. La produzione di questi formati avviene utilizzando materie prime ad elevata plasticità, che permettono di ottenere lastre particolarmente flessibili. Questa flessibilità si traduce in un minimo grado di convessità che ne facilita la posa, consentendone una maggiore adattabilità alle condizioni del sottofondo. Una volta posate sul massetto queste piastrelle si auto-livellano per il loro stesso peso. L'installazione risulta più semplice e, indipendentemente dallo schema di posa, la superficie risulterà sempre perfettamente planare.

In its most prestigious collections, ABK also includes large ground slabs sized 40x170, complete with matching smaller tiles sized 20x170 and 20x120. These larger sizes are produced using raw materials characterised by high plasticity, which enables the slabs to be particularly flexible. This flexibility translates into a minimum level of convexity which facilitates installation, enabling greater adaptability to substrate conditions. When laid on the screed, these tiles self-level due to their own weight. Installation is easier and, irrespective of the laying pattern, the surface will always be perfectly level.

AUTO-LEVELING

 Facile installazione - Easy laying

Tutti i prodotti Auto-Leveling possono essere montati seguendo il sistema Insta-Tile, un nuovo metodo di posa a secco che consiste nel fissaggio del materiale direttamente sul pavimento preesistente, senza alcuna opera di demolizione. Si inizia posizionando l'apposito tappetino dello spessore di circa 2mm tra il pavimento e la lastra auto-livellante e, mantenendo una distanza di 5mm da tutte le pareti interessate, si prosegue con la posa delle piastrelle, senza creare alcun tipo di fuga tra una e l'altra, praticando tutti i tagli necessari fino a coprire completamente il vecchio pavimento. A questo punto si procederà con l'inserimento del profilo stabilizzante che andrà a colmare la distanza lasciata dai muri per tutto il perimetro per rendere completamente stabile il nuovo pavimento, la cui superficie risulterà perfettamente planare anche senza l'utilizzo di colle e sigillanti. Il pavimento Insta-Tile potrà così essere facilmente rimosso e recuperato in qualsiasi momento.

Per maggiori informazioni sulla tecnologia Auto-leveling e sul sistema di posa Insta-Tile puoi effettuare il download del filmato ufficiale di presentazione su www.abk.it

All Auto-Leveling products can be installed following the Insta-Tile system, a new dry installation method which consists of fixing the material directly to the existing floor, without the need for any demolition work. First of all, the specially designed 2-mm thick mat is laid between the floor and the self-levelling slab then, leaving a distance of 5 mm from all perimeter walls, the tiles are laid without any joints in between, making all the cuts necessary to completely cover the existing floor. Next, the stabilising edging is fitted, filling the distance left between the edge of the tiles and the perimeter walls: this makes the new floor completely stable and the surface perfectly level, even without the use of adhesives and sealants. The Insta-Tile floor can thus be easily removed and recovered for use elsewhere as and when required.

For further information on Auto-leveling technology and the Insta-Tile installation system, download the official presentation video on the website www.abk.it

LA GARANZIA DI UN FUTURO GREEN BUILDING PASSA ATTRAVERSO LA QUALITA' ECO-SOSTENIBILE.

Da azienda sensibile alle tematiche ambientali, ABK si è sempre preoccupata di mantenere i parametri che regolano i processi industriali al di sotto delle normative, composto al 40% minimo da materiale riciclato recuperato da altre lavorazioni industriali. ECO-BODY è ufficialmente certificato per recepire gli standard LEED (Leadership in Energy and Environmental Design) il sistema di rating internazionale delle performance ambientali che in edilizia promuove la progettazione sostenibile riguardante l'intero edificio per ridurne l'impatto ambientale per tutto il suo ciclo di vita. Tutte le collezioni ABK che utilizzano questo speciale impasto certificato, riportano nella pagina riepilogativa l'esclusivo logo ECO-BODY, che oltre ad indicare il 40% minimo di materiale riciclato, ne evidenziano la compatibilità col sistema di crediti LEED.

ABK è membro di GREEN BUILDING COUNCIL ITALIA, l'associazione italiana dei leader che operano per trasformare il mercato dell'edilizia verso la sostenibilità ambientale e per costruire comunità vivibili. I soci GBC Italia promuovono la responsabilità ambientale, economica e sociale innovando il modo in cui gli edifici sono progettati, realizzati e utilizzati.

THE FUTURE OF GREEN BUILDING IS GUARANTEED BY ECO-SUSTAINABLE QUALITY.

As a company that cares deeply about environmental issues, ABK has always endeavoured to keep its parameters below the legal limits for manufacturing processes, utilising a minimum of 40% recycled material recovered from other industrial processes. ECO-BODY is officially certified for access to LEED (Leadership in Energy and Environmental Design) credits, the international rating system for environmental performance which promotes sustainable design in the construction industry with a view to reducing the overall environmental impact of buildings over their entire life cycle.

All ABK collections made with this special certified mix are identified in the contents page with the exclusive ECO-BODY logo, which in addition to indicating a minimum of 40% recycled material, underlines the product's compatibility with the LEED credits system. ABK is a member of Italian GREEN BUILDING COUNCIL, the association of top players working to transform the building market towards sustainability and to build liveable communities. GBC Italian members promote environmental, economic and social responsibility, innovating buildings in terms of engineering, design, manufacturing and use.

The system is based on credits awarded for each of the sustainability requirements met by the building. The sum of the credits determines the level of certification obtained. Although LEED certification is awarded to buildings and not single products, ceramic tile products contribute to the achievement of LEED credits.
